

**LEED 2009 for Core and Shell Development –**

Category Name:	Number of possible Points:	Explanation:
Energy & Atmosphere – EA Prerequisite 2 Minimum Energy Performance	n/a	In order to add to the building’s insulation and contribute to the building envelope design, our component daylighting fixtures have two mylar thermal barriers which create three separate air spaces within the fixture. Our units have very high R value and low U factor ratings. We can also provide a double dome skylight where needed in extreme climates.
Energy & Atmosphere – EA Credit 1 Optimize Energy Performance	21	Our highly efficient component daylighting systems provide enough light to completely replace electric lighting for 8 or more hours each day, offsetting one of the building’s largest loads. You can earn 3 points by improving energy performance by 12% for a new building or 8% for an existing building. Every 2% more of energy use reduction earns 1 additional point, to a maximum of 21 points possible for showing a 48% improvement on new buildings or 44% on existing building renovations.
Materials & Resources – MR Credit 5 Regional Materials	2	If the LEED project is located anywhere within 500 miles of our Glendale, AZ manufacturing plant, you could qualify for a Regional Materials Credit. This includes any project in AZ, NM, southern UT, southern CA, and southern NV. 1 point is possible if you use 10% Regional Materials, and 2 points for 20% Regional Materials
Indoor Environmental Quality – IEQ Credit 8.1 Daylighting & Views – Daylight	1	This is the essence of what we do. We were one of the first daylighting companies. You can earn the credit by daylighting at least 75% of the

Corporate Office – 3696 Haven Ave, Suite A, Redwood City, CA 94020 650-779-4630

Manufacturing – 6042 N 53<sup>rd</sup> Dr, Glendale, AZ 85301 623-463-0901

		regularly occupied interior spaces, and that is easily accomplished with our toplighting systems.
Innovation and Design Process – ID Credit 1 Innovation in Design	1 or more	One additional point may be awarded for each credit in which the requirements are exceeded. More additional points may be awarded for “comprehensive strategies which demonstrate quantifiable environmental benefits” which are typically unique approaches not addressed in existing credit requirements.
